

# Improve your RightShip Safety Score

ASP Ships Group works with ship owners to prepare vessels and crew for RightShip inspections.

We aim to improve RightShip Safety Scores and thus enhance our clients' fleet profile with first class charterers.

We attend vessels on a regular basis to inspect and then provide practical guidance on improving RightShip ratings to both crews and shoreside teams:

- Qualified ASP Technical staff can attend at any ports worldwide
- Comprehensive pre-RightShip inspection to identify improvement areas (based on RISQ 3.0)
- Training and advice on how to manage a RightShip inspection given to ship's crew
- All issues that will affect the RightShip Safety Score are identified along with remedial measures required
- Full report provided to the ship owner with recommendations for improvements onboard and in processes & systems
- ASP technical staff can attend onboard just prior to a RightShip Inspection to provide coaching and assistance to the officers

**RIGHTSHIP**

**DryBMS**

If you would like help in improving your RightShip Safety Score, then please contact us:

ASP is a marine services business offering Technical & Crew Management, Newbuild Supervision & Technical Services.

We operate from 12 offices with a focus on the Asia-Pacific region including Australia & New Zealand.

Our team has comprehensive experience in managing safety & compliance for dry bulk vessels.

We technically manage bulk carriers under the RightShip inspection regime and have completed the Dry BMS Audit conducted by RightShip. So, we know what is required.
